33472/BHR5046TW

Double Water Ion Therapy

- With tens of millions of negative ions*, this hair dryer can keep the natural moisture in the hair while also effectively reducing split ends and frizz, thus improving hair strength and making it more resilient

- The built-in condenser* condenses the moisture in the air and two needle-shaped motors rapidly atomize it into tiny negative water ions. Through a separate cold-air channel, these ions are delivered directly to the hair, scalp, and root, which protects your hair from being damaged by excessive temperatures while also hydrating it.

NTC Smart Temperature Control

- The NTC smart temperature control automatically adjusts the time interval between hot and cold air based on the detected ambient temperature, so as to provide comfort for the head while also maintaining healthy scalp and hair.

Compact metal Body. Fits in Your Toiletry Bag

- The ultra-short cylinder is small and exquisite, making it a breeze to pack and carry when you're traveling for business or pleasure. Its compact and lightweight design won't tire out your arm after a blow-dry. The anodized aluminum alloy finish adds texture and attractiveness to the hair dryer

Smart Hot/Cold Air Alternating Mode to Prevent Hair Damage

- The glass bead thermal sensor can accurately detect the air outlet temperature 60 times per second*, and adjust the airflow temperature in real time to avoid overheating your hair and scalp. Its hot/cold air alternating mode - hot air for quick drying, cold air for styling - not only protects the hair surface from getting scorched or damaged, but also moisturizes the ends and offers enough care for the sensitive scalp
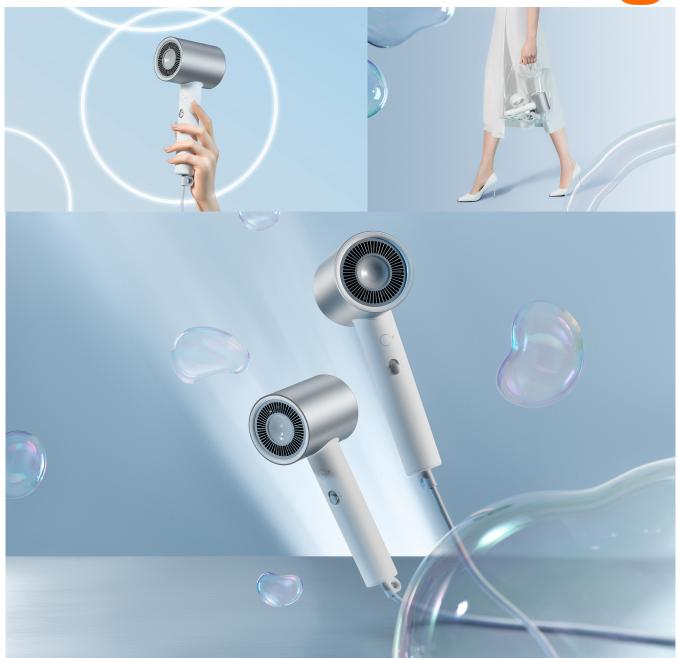

360° Rotation for Desired Styling

- The 360° fully rotatable magnetic nozzle concentrates the airflow for fast drying and tailored styling. The dual-layer design also reduces the temperature of the nozzle and effectively insulates against heat.

Adjustable Temperature and Speed for Multi-scene Applications

- Three heat settings allow you to switch between hot and cold air, and two speed levels give you more control over the style of your hair. When the air temperature is adjusted to either hot or cold, the dual-color LED indicator light changes color accordingly. The temperature setting is kept and saved automatically for your next use. Multiple speed and heat settings are provided to make blow-drying and styling easier and more flexible.

Specs:

Name : Xiaomi Water Ionic Hair Dryer H500

Model : CMJ03LX

Rated Voltage: 220V-240V ~

Rated Frequency: 50-60HZ

Net Weight: 650g (including air nozzle)

Rated Power: 1800w

Product Size: 237 x 144 x 79mm (including air nozzle)

Power Cord Length: 1.7 meters

Wind Speed: 20m/s

Noise: ≤75dB

Package Content:

Hari Dryer x1   Air Nozzle x1   User Manual x1   Warranty Notice x1
